# Krupali Pilgulwar

Automation Architect | CSTE Certified | rpkrupali@gmail.com | 224.715.0463

More than 12 years of diversified experience in management, leading, analysis, development and design of manual/automated tests. A role model who willingly mentors' junior colleagues by sharing knowledge and experience in support of organizational goals.

- Introduced Automation Testing and responsible for Cost savings
- Decreased test time by 35%, collaborating with Test Automation to plan effort for each release
- Expertise in Selenium Automation using Selenium WebDriver.
- Plan and drive execution of Selenium-Protractor framework implementation using .Net for large scale distributed system.
- Used AWS for continuous integration server to run automated test suites.
- Maintained Selenium Automation Code and resources in source controls like GIT for improvements and new features.
- Performed cross browser (IE, Firefox, Chrome) testing.
- Designed and implemented different automation frameworks.
- Experienced in different types of testing on AUT like GUI, Functional, Regression, System Testing, Integration, and end to end Testing.
- Experience in leading and managing teams comprising 25-30 resources.
- Strong experience in tool evaluation and implementation.
- Strong understanding of SDLC (Agile Scrum, Waterfall) and QA testing methodologies.
- Expertise in creating and executing Test Plan, Test Cases, Test Scripts and Test Scenario for different types of testing.
- Hands-on experience in SQL.
- Very good experience in debugging and design analysis and implementation
- Excellent experience in Onsite Offshore model.
- Experience in Web Services testing using SOAP UI and Postman Tools.
- Team Leadership
- Complex problem solving
- Cross-Functional Collaboration

# **Technical Skills**

Operating System | Microsoft Windows, Linux, Unix, MacOS
Database | MySQL, Oracle, Microsoft SQL Server

Automation | QTP/UFT, Selenium, Protractor, Appium, Copado(For salesforce)

Test Framework | TestNG, Junit, Nunit

Web Service Testing | SoapUI, Postman, RestSharp

Test Management | MTM, Zephyr, X-ray

Defect Tracking | Bugzilla, Team Foundation Server, Jira

CI Tool | Jenkins, Azure

Version ControlTFS, GIT, Bitbucket, GitHub

Source Code Editor | VS Code, SmartGit, SourceTree, Visual Studio

Performance Test tool Visual Studio, Load Runner

Platforms | C#, Java, JavaScript, Json, Ajax, VBScript, Angular, HTML, Python,

XML, Groovy

BDD | CucumberCRM | Salesforce

# Professional Experience

#### Univar - Downers Grove, IL, 2018 - till date

Automation Architect, April 2018 – till date

#### **Responsibilities:**

- Implementation of automation framework in Selenium using Java and testNG testing framework.
- Used maven as build automation tool for scheduling automation jobs in Jenkins.
- Implemented a branching and merging strategy, code review process and steps for reporting/resolving bugs for the Selenium Web Driver framework.
- Successfully completed POC of running automated tests in Azure
- In process of CICD using Azure so implemented maven and azure connectivity to deploy automation framework artifacts in Azure.
- Responsible for tool evaluation and selection and its implementation.
- Test data management for automation.
- Created automated scripts of Business requirements using Selenium for eComm application and Copado for Salesforce.
- Trained and mentored team members for automation.

- Automation tasks delegation to team members
- Documented intake process for new test cases, user acceptance procedure, and steps to define adequate code coverage, automation framework and coding practices.
- Automation of eComm applications and Salesforce platform tests and deployment process.

### F & I administration Solution - Lombard, IL, 2011 - 2018

QA Manager, Jan 2017 – April 2018

Sr. QA Lead, Jan 2013 – Dec 2016 QA Lead, April 2011 – Dec 2012

#### **Responsibilities:**

- Planning and execution of QTP to Selenium Migration.
- Defined Automation strategy, planning and execution.
- Involved in the Design and implementation of Selenium with Cucumber for behavior driven development.
- Browser testing automation designing and implementation using cross browser.
- Continuous process improvement, new tool research and implementation include implementation of X-ray, Selenium and many more.
- Manage all aspects of test planning and implementation overseeing the QA staff, schedules and estimation.
- Extended automation to test deployments and smoke test functionality for in any environment.
- Developed estimation model using excel macro.
- Implemented Jira workflows for QA tasks.
- Defined structure for test artifacts management through TFS and confluence.
- RACI implementation for QA leads, analysts.
- Design and execute test strategy across the project.
- Leveraged SOAPUI Tool to test SOAP and Restful API's.
- Used SQL for database testing, automation input, data creation.
- Performance/Load testing using Microsoft visual studio.
- Implemented Test data management, database restore and backup process.
- Collaborated with both the product and development teams to ensure all the changes to the software meet the requirements and do not negatively impact functionality.
- Continuous monitoring of deliverable deadlines and increase the resources to mitigate delivery slippage in potential situations.
- Expansion of QA team to offshore includes hiring, onboarding.

- Performance reviews twice in a year for each of my team member.
- Test cases management from excel, MTM till X-ray.
- Involvement in implementation of agile SDLC from waterfall.
- Used SourceTree, smartGIT and bitbucket for managing GIT repositories.
- Involved in design and implementation of Automation using Selenium, Protractor and converting manual tests to automation test script using Selenium WebDriver
- Performed different type of testing which includes acceptance, functional, cross browser, cloud, mobile app testing (iOS, Android), smoke, penetration, PSR (Performance, Scalability and Reliability) testing.
- Planned and executed testing strategy for data center move, database upgrade projects.

# Walgreens - Deerfield, IL, 2007 - 2011

Sr. QA, Jan 2008 – April 2011 QA, July 2007 – Dec 2007

## Responsibilities:

- Allocation of resources to various projects and mentored juniors, peers and developers.
- Provide Senior Management Test Prep and Execution Metrics for all phases of project
- Project estimation and scheduling
- Define QA testing plans and procedures on the individual project/task on all aspects of PBM – Pharmacy Benefit Manager
- Develop Test Plan as per business requirements.
- Perform execution of test cases, review test cases.
- Functional, GUI and various types of testing for Ecommerce business processes on cloud platform.
- Work with development team to implement and use of the bug tracker, release notes and standard software development process
- Tracking actual hours against project estimation.
- Preparation of test cases & execution using Quality center
- Defect management using JIRA, Bugzilla and confluence
- Work with customer service to manage incoming customer responses, track and respond to user generated issues
- Worked with business for user acceptance testing.
- Involved in the requirements gathering from Business Partners and prepared the effort estimation
- Backend testing using SQL for database testing and Unix to execute and test the batch files
- Prepared traceability matrix for test coverage.
